Aug. 21, 2024 11:40 am

Fractal AI data could save Republicans from the organized Democrat fraud in 2024.

Jerome R. CORSI, Ph.D. tells The Gateway Pundit, “We have cracked the Enigma Machine of Democratic Election Fraud.”

And officials are taking the findings seriously.

Brian Katz, Ohio Public Integrity Division Director, announced on Monday that the Secretary of State's Office will investigate algorithms placed in the Ohio State Board of Elections voter registration file.

Katz writes, “My understanding is that you have knowledge of certain algorithm embedded in the state's voter registration database that could allow for the manipulation of mail-in voting records or other election data.”

Katz told Dr. Corsi, “I ask that you provide this evidence as soon as possible to our office's Election Integrity Unit.”

Here is the letter Dr. Corsi received earlier this week, via GodsFiveStones.com.

Mr. Corsi,

As the director of the Ohio Secretary of State's Public Integrity Division, I've been made aware of your claim to have evidence that Ohio's voter registration and tabulation systems can be compromised. My understanding is that you have knowledge of certain algorithms embedded in the state's voter registration database that could allow for the manipulation of mail-in voting records or other election data.

The Secretary of State has the authority under state law to "investigate the administration of election laws, frauds, and irregularities in elections in any county, and report violations of election laws to the attorney general or prosecuting attorney, or both, for prosecution." R.C. 3501.05(N)(1).

I ask that you provide this evidence as soon as possible to our office's Election Integrity Unit, and I invite you to arrange a call or meeting to provide additional insight so we can take appropriate steps to investigate these assertions. Please be advised that our office has the statutory authority to "issue subpoenas, summon witnesses, compel the production of books, papers, records, and other evidence, and fix the time and place for hearing any matters relating to the administration and enforcement of the election laws." R.C. 3501.05(EE).

I look forward to hearing from you soon.

Respectfully,
-Brian Katz

Brian Katz | Public Integrity Division Director
Office of the Ohio Secretary of State

Dr. Karladine Graves and Dr. Jerome Corsi have created a 501(c)3 educational non-profit, God's Five Stones, to focus in part on election integrity.

The God's Five Stones website published a paper by Andrew Paquette, Ph.D., who documented when working with the New York Citizens Audit (NYCA), clear evidence that an algorithmic code has been placed onto the New York State Board of Election's (SBOE) voter registration database that alters voter identification numbers (IDs) that allow the creation, voting, and hiding of falsified voter registration that could be used in a mail-in ballot election fraud scheme.

On July 27, 2024, Paquette published on his substack an update showing that the New York SBOE had recently changed all their voter ID numbers, providing evidence that the Spiral Cipher that Paquette originally detected remains operative today.

In addition to New York State, Paquette **has detected evidence of algorithmic alteration of SBOE voter registration roles in as many as 13 additional states**, with algorithmic coding confirmed in both New Jersey and Hawaii.

Based on scatterplot analysis (i.e., mapping SBOE IDs as the dependent variable on the X-variable and voter registration date as the independent variable on the y-axis presents prima facia evidence of algorithmic alteration of the SBOE voter registration database in Ohio,

North Carolina, Pennsylvania, and Texas (Harris County).

While it is premature to assert that the algorithmic alteration of SBOE voter registration databases has been used to conduct election fraud, coding alteration of SBOE voter registration databases is inherently suspect of malevolence that needs to be investigated further before the presidential election on Tuesday, November 5, 2024.

The advantage of SBOE algorithmic election fraud is that a small group of National Security Agency professional cryptographers could conceivably carry off an election steal that would be difficult, if not impossible, to detect by honest SBOE officials as the election was being conducted.

Paquette insists that the algorithmic alteration of SBOE voter registration rolls would permit rogue SBOE officials steal elections either as voting were occurring, or after a pause in vote tabulation to premit the request, printing, and voting of “clone” or “ghost” fraudulent SBOE IDs that would be counted because they would be certifiable, even if fraudulently so.
