

## **EXCLUSIVE | Dr. Peter McCullough: ‘Don’t Take Any More’ Genetic Vaccines, Dangerous Foreign Spike Proteins ‘Lead To Chronic Disease’**

By [Alicia Powe](#) Published January 24, 2022 [Story source: Gateway Pundit](#)

Dr. Peter McCullough, an internist, cardiologist, epidemiologist and leader in the medical response to the COVID-19 disaster throughout the pandemic, urged the public to abstain from additional Covid vaccination.

Those who have already received a dose or two of the experimental mRNA shots will dramatically increase the risk of suffering from its debilitating or lethal side effects if they receive a third dose, McCullough told the *Gateway Pundit* during the Defeat The Mandates rally on Sunday in Washington, DC.

“Vaccines are largely unnecessary and if there was a safe and effective vaccine—if ... the only application, in my view, would be our high-risk seniors, those in nursing homes, congregate living centers. Potentially, direct health care workers for our seniors. That’s it,” he said. “In the United States, that’s fewer than 3 million people would ever get a vaccine. I think we’ve seen the end of a broad employment of vaccines. It’s obviously backfired. Vaccination should only be narrow and targeted for highest risk group.

As of yet, there is no established method or understanding of how to dispel the mRNA technology from the body, or detox from vaccine injury, the Texas-based physician contends:

“For the genetic vaccines, Pfizer, Moderna, Johnson and Johnson and AstraZeneca, there is no known detoxification method. Sadly, the genetic material lasts in the body far longer than what we thought and the **spike protein** that’s produced is probably in the body for greater than a year and **it’s in vital areas, including the brain, the lung, the heart, the bone marrow, the reproductive organs**. And it takes a very long time for the body to clear out this dangerous, foreign, protein. The only thing **I can advise individuals is, don’t take any more of it**. There is going to be a progressive accumulation of spike protein in the human body that cannot get out. It will almost certainly lead to chronic disease.

“**Worldwide, the vaccine programs have backfired**, meaning those countries that have the highest use of vaccines have the highest mortality rates.” Not only are Covid vaccines hazardous and deadly, but hospitals across the United States are dangerously adhering to new Covid protocols that are a death sentence for Covid-infected in-patients, McCullough warns:

Right now when patients are receiving outpatient care, they come into the hospital — there is the cessation of care.

The hospitals have clearly locked themselves into protocols and these protocols have now been evaluated. A recent analysis by Christine Burns in Jamba, [India] has shown that the protocols are not trustworthy. That they don't commit to giving the risks, benefits or treatment. They don't give expert reviews or updating. And these protocols are effectively not offering patients the quality of care that they should receive. Because they don't receive high intensity, high quality of care, lives are lost.

There's a process called 'medication reconciliation,' meaning the outpatient drugs that we use should be continued as an inpatient — and they include Ivermectin, Hydroxychloroquine, the use of monoclonal antibodies, it doesn't matter if they are just in the ER or just on the other side, in an admission. The use of cortical steroids, Colitsine, aspirin... There should be no barriers between the inpatient and outpatient realm in terms of continuation of care.

Covid-positive patients are typically provided **Remdesiver, a drug that deteriorates the kidneys and the liver**, in hospitals. As the patient's health declines, doctors in adherence with the new emergency Covid regulations then subject those they are responsible for curing to **endotracheal intubation, a procedure that will likely kill them**.

They are given a very meager dose of a glucose cortecoid, which is Dethamethasone, and then get Remdesivir, which is far too late," Dr. McCullough said. "Remdesivir — its only hope is given very early against viral replications. Sadly, it's given too late to patients who only experience renal and hepatic toxicities.

**McCullough concurs with the increasingly prevalent estimation that the coronavirus pandemic and the government's all-encompassing effort to vaccinate the entire population is a scheme to depopulate humanity.**

"Hospital administrators and doctors cannot explain themselves. And they need to," he said. "So far, there have not been legal cases that I'm aware of that are addressing the quality of care of in-patient from COVID-19. But I'll say this much, two years into this, not a single hospital in the United States claims to be a center of excellence for taking care of COVID-19."
