

Shocking report suggests COVID-19 vaccines have caused millions of deaths worldwide

([Natural News](#)) [A September 2021 report](#) by David John Sorensen and Dr. Vladimir Zelenko raised the possibility that millions have died or suffered from serious side effects and adverse events because of the “experimental mRNA gene therapy” known as Wuhan coronavirus (COVID-19) vaccines.

In the report, Sorensen and Zelenko highlighted disturbing vaccination trends through their analysis of publicly available data. Both experts claim that the damage is so severe that it can be considered “genocide.”

Sorensen and Zelenko focused their report on data from the U.S., but they believe the worrying trends can also apply to other countries since most of them share similar “systems of corruption” that approved the mass circulation of the same vaccines.

Here are [some of the issues brought up in the report](#):

- According to America’s vaccine safety surveillance system Vaccine Adverse Event Reporting System (VAERS), as of September 17, 2021, at least 726,963 individuals have experienced adverse events post-vaccination. These events include blood clots, brain disorders, heart failure, infertility, miscarriage, [seizures](#) and [stroke](#).
- Within the same period, VAERS data revealed that at least 15,386 people died because of COVID-19 vaccines. However, there might be even more unreported cases since VAERS is vastly underutilized by most healthcare providers. Additionally, the majority of the population isn’t aware of the existence of systems where they can report these vaccine adverse events, such as VAERS.
- Rates of anaphylactic shock post-vaccination are supposedly 50 to 120 times higher than reported.
- According to an anonymous *Centers for Disease Control and Prevention* (CDC) whistleblower who investigates healthcare fraud, based on Centers for Medicare & Medicaid Service (CMS) data, the true rate of coronavirus vaccine-related deaths could even be five or 10 times higher than reported.
- Individuals who are less than two weeks out from receiving their second dose aren’t considered fully vaccinated. This means that if they die within this time frame, their death is likely not investigated, nor listed as a vaccine-related death.
- More than 250,000 Facebook users have commented about vaccine deaths and serious injuries.

FDA-approved drugs aren’t always “safe and effective”

Because of the COVID-19 pandemic, the world will never forget that a never-before-used-in-humans pharmaceutical gene technology known as mRNA technology went from “investigational,” which can also be considered “experimental,” according to the *Food and Drug Administration* (FDA), to “FDA-approved” after only several weeks.

The vaccines were approved after only a matter of weeks and after only months of clinical research. In contrast, other vaccines were studied for at least several years before being approved for public use. (Related: [Pfizer’s COVID vaccine causes miscarriages, stillbirths.](#))

This highlights the fact that just because a vaccine is FDA-approved doesn’t mean it is always “safe and effective.”

In fact, at least dozens of drugs had to be pulled off the market years or even decades after being “fully approved” because of new data that revealed how these drugs caused injuries, illnesses and deaths. Despite the undeniable proof that the vaccines cause more harm than good, mainstream media and government officials continue to lie about the safety of vaccination against COVID-19.

When former President Barack Obama delivered a keynote address at [Stanford University](#) on April 21, he claimed that even though billions of people worldwide have “[essentially clinically tested the vaccine](#),” at least one in five Americans is still “going to put themselves at risk and put their families at risk rather than get vaccinated.”

But when has health freedom ever been considered selfish?

No matter what the mainstream media and governments across the globe claim, there is a wealth of data proving that the COVID-19 vaccines are not 100 percent effective at preventing coronavirus infections. Vaccines are also often linked to adverse effects and deaths, so think twice about giving up your right to decide.
